PR done differently

Standout with modern software built for public relations.

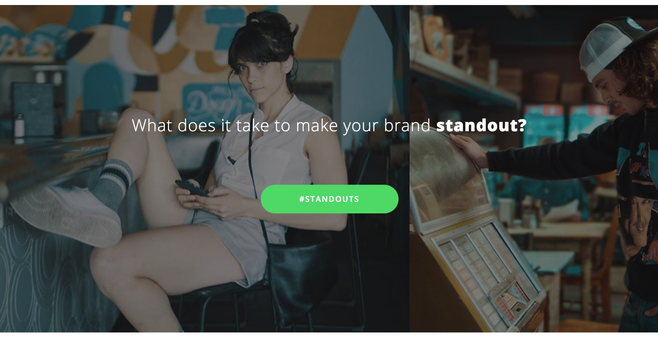
GET STARTED - $14.95/MO

PRODUCTS

Everything you need to standout

We build smart products for brand communications which convert to increased visibility, better relationships and more sales.

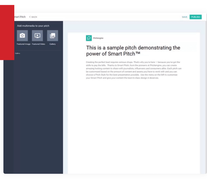
Create · Integrate · Measure · Beta



FEATURES

Your PR Toolkit

Six new tools built specifically for public relations professionals.

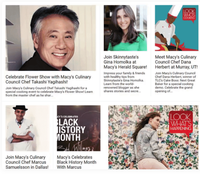


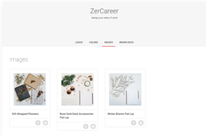
Smart Pitch™

Build a better press release consistently and with the multimedia people have come to expect from a content creator like you. Upload and reuse things like boilerplates and contacts. And customize the layout each release you create with the Pitch Style that fits your content best. Learn more

Newsboard

The blog-as-newsroom thing is dead because we just killed it. We've just shuttered the clunky process of posting news to your website (or your client's website). No more logging into CMS systems like Wordpress just to re-share something that already exists online elsewhere. Newsboard works like Pinterest — just pin a news article, press release or social update right to your board, which serves as a replacement for your boring "bloggy" newsroom or the press page of web 1.0. Learn more



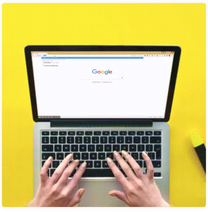


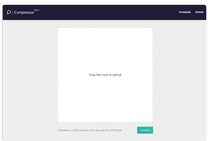
Assets

Every brand has assets that need shared. Upload your logo files, marketing images, corporate head shots and more to your Assets page and link to them from your website so that people can find them. This is a great way to provide something a little extra to your clients and it's a helluva time saver on a daily basis when someone needs your logo. Learn more

Tiny Pitch™

Andrew Medal of Entrepreneur calls Tiny Pitch "...a killer product. It's honestly one of my favorite new products and super effective for all types of press creation." Create and post a compact, but powerful version of the press release using only your email. This means you can create PR from your smartphone or any other device with internet access. Learn more





Compressor

Word docs getting you down? We invented Compressor to help modernize communication flow for people who still deal in docs. It's super simple and efficient: Drop your doc and images into Compressor, customize the headline and summary text then hit 'Compress' and share it via email and social channels where docs aren't usually welcome (Facebook, Twitter and more). You can also embed your tiny pitch into your own blog or website. Try it

Ping Analytics

We built an intuitive PR tracker for any link. Shorten your link and track it all all over the web with Ping. Use custom urls or password protect your PR content with this simple, but powerful tool. Try it
